

-----Creating database

```
create database cab;
```

```
use cab;
```

-----Dropping database cab

```
drop database cab;
```

-----Creating table

```
create table login(
```

```
username varchar(200),
```

```
password varchar(200)
```

```
);
```

-----Printing all the element in the table login

```
select * from login;
```

-----User table

```
create table users(
```

```
driver_name varchar(100),
```

```
pickup varchar(100),
```

```
destination varchar(100),
```

```
amount int,
```

```
orders varchar(200)
```

```
);
```

-----Dropping table users

```
drop table users;
```

-----Create table driver

```
create table driver(  
driver_name varchar(100),  
id int,  
numbers int,  
orders varchar(100),  
gender varchar(100)  
);  
drop table driver;
```

-----Create table feedback

```
create table feedback(  
Rating varchar(100),  
comments varchar(100)  
);
```

-----bookcab table

```
create table bookcab(  
cab_type varchar(100),  
pickup varchar(100),  
destination varchar(100),  
fairdetails int,  
cab_size varchar(100),  
cab_model varchar(100),  
cab_number int,  
cab_details varchar(100)  
);
```

-----create table adminLogin

```
create table adminLogin(  
name varchar(100),
```

```
password varchar(100),  
mobile_no int,  
address varchar(100)  
);
```

-----Create table trip

```
create table trip(  
pickup varchar(100),  
destination varchar(100),  
fairdetails int,  
trip_duration int,  
distance int);
```

-----create table payment

```
create table payment(  
amount int,  
bankname varchar(100),  
payment_id int,  
orderdate datetime  
);
```

-----Create table customerprofile

```
create table customerprofile(  
username varchar(100),  
password varchar(100),  
name varchar(100),  
mobile_no int,  
gender varchar(20),  
address varchar(100)  
);
```

-----Create table bill

```
create table bill(
```

```
name varchar(100),
```

```
pickup varchar(100),
```

```
destination varchar(100),
```

```
address varchar(100),
```

```
bill_no int
```

```
);
```

```
//Printing all the element from the bill
```

```
select*from bill;
```

```
//Show all the tables from the database
```

```
show tables;
```
